13 Courses

- Introduction to Data Engineering
- Introduction to Relational Databases (RDBMS)
- SQL: A Practical Introduction for Querying Databases
- Hands-on Introduction to Linux Commands and Shell Scripting
- Relational Database Administration (DBA)
- Data Warehouse Fundamentals
- Introduction to NoSQL Databases
- ETL and Data Pipelines with Shell, Airflow and Kafka
- Introduction to Big Data with Spark and Hadoop
- Data Integration, Data Storage, & Data Migration
- Data Privacy, Security, Governance, Risk and Compliance
- Enterprise Data Architecture and Operations
- Data Architect Capstone Project

May 25, 2026

Antonio Cangiano

Antonio Cangiano
Director, IBM Skills Network

ERIC DAVID RODRIGUEZ FLORES

has successfully completed the online Professional Certificate

IBM Data Architecture

This Professional Certificate provides an understanding of core data architecture concepts, tools, and practices. The learners gained foundational skills in data engineering, SQL, and relational databases, along with essential technical proficiencies such as Linux commands, shell scripting, and database administration. They explored advanced topics, including data warehousing, NoSQL databases, and building ETL workflows with tools such as Airflow and Kafka. They learned to analyze large datasets using Spark & Hadoop. They gained critical abilities in data integration, storage, migration, & architecture design. By completing the hands-on labs and a capstone project, learners demonstrated their ability to design and implement data systems while ensuring governance, privacy, and compliance.

This certificate attests to the learner's completion of an online program delivered via Coursera. It does not constitute formal enrollment at any university or entity and does not itself grant academic credit, grades, or a degree. Institutions or organizations may, at their discretion, recognize this learning toward their own programs or credentials.
